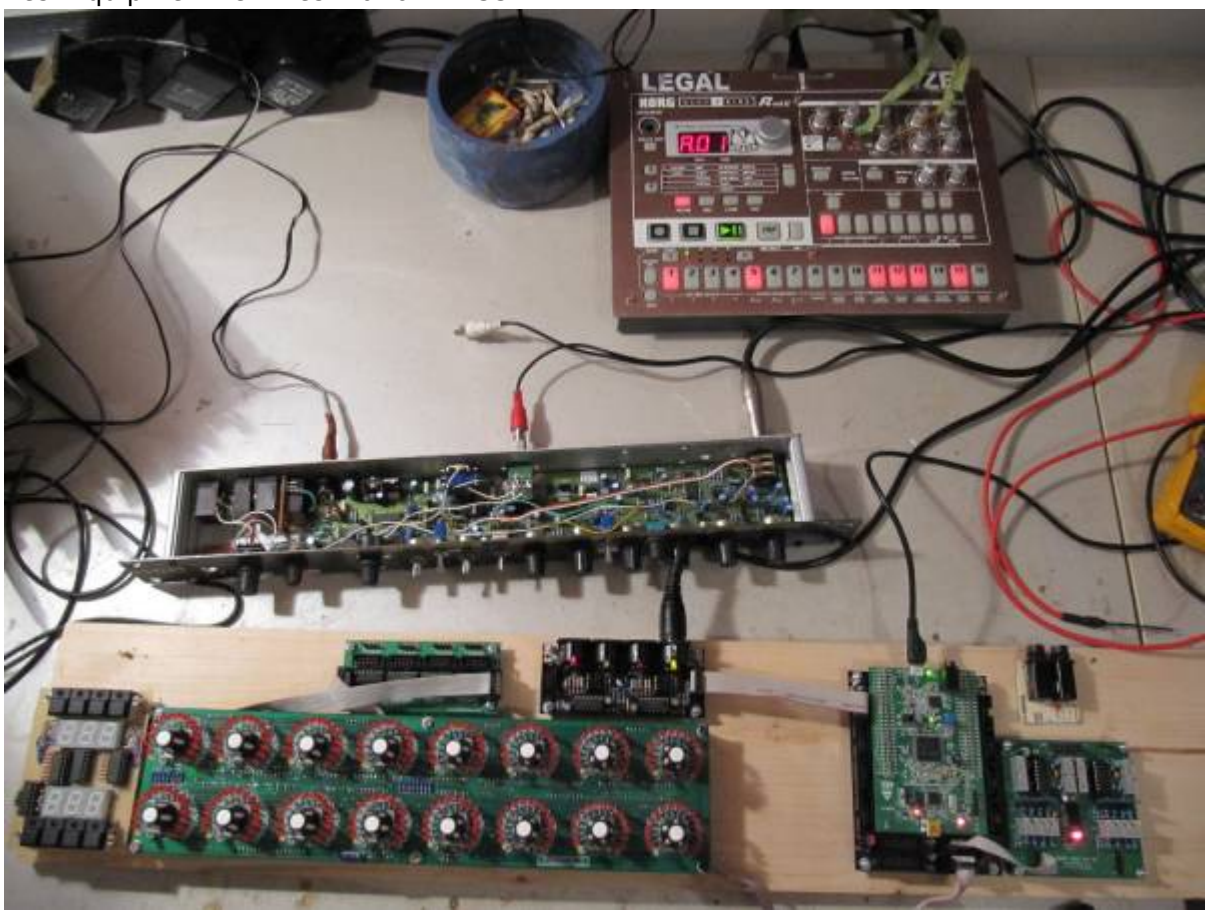
EASY CV

Test Equipment: CV-Destination MB33 MAM:



Introduction

Digital created LFO+ENV with CV-Output. No Displays, No Menues, Minimal buttons, much Scopes, much Led-Ring-Rotarys (Planed for LRE-8x2CS), one big UI with complete functions for one LFO+ENV Voice… switching between the UI-Voices is done from the BREAKOUTMODULES…to this later

LFO+ENV are mixed together softwareside, to use only one CV-Output
8xCV-Outputs (VOICES) are supported > if u are on a VCF+VCA-Setup = 4 Voices on the Analog-Side (4xFilterbank)
Copy Paste for LFOs and ENVelopes between the Voices
Copy Paste for a Songa aka Preset aka Bank aka Program(change)
Jam Style Pattern load (next Preset Display) + Preset Morph between Current-Preset and Next-Preset

A Breakoutmodule for each CV-Output, with Depth-rotary, Focusswitch (Pushrotary), 2x Scopes (LFO+ENV) and LFO/ENV-Switch to show on one Display the Mixed Waveform & to switch the Rotary to “ENV” or “LFO” Mode (there is only space for one Encoder - maybe just make PAN Style, instead of 2 individual level -maybe more live feel?, how ever when using an 3Stage switch, i could disable MIX-View, or display it on ENV or LFO…maybe a good choise ;)) The Depth-rotary has no Ledring, want to display it as a bar or as Value in the scope…

Whole thing will not be compatible on MB-CV concepts… i will copy code snippets and so on, but i

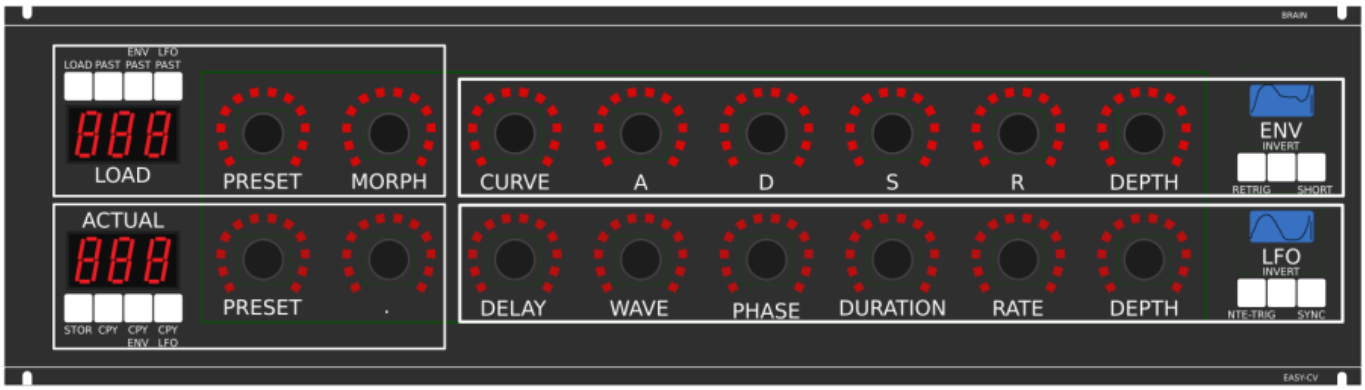
have to understand it from scratch... anyhow this is not generic

FrontPanel

Brain

THE **LEFT** SIDE of the BRAIN > Preset-Management: **Save** & **Load** the PROGRAM, can be done by Midi-ProgramChange -or With the LOAD-**PRESET**-Encoder
then press **LOAD** -or **Morph** to the next Program slowly with the MORPH-Encoder
-Another option is to take a **PUSH-ENCODER** for **LOAD** & **STORE** > and load and store it by pushing it... would free 2 buttons for other functions.
MORPH?:
-The Upper 7 Segment LED- Display: is the **LOAD Display** indicate the new Program with ENV+LFO -
The downer7 Segment LED- Dsipaly: is the **STORE Display** it indicates also the current Program with ENV+LFO
–with morph you crossfade between both Presets (be carefull, first Store the current Preset
Paste & **Copy** do their job @ the whole PROGRAM Memory
ENV-PASTE & **ENV-COPY** do their job @ the selected Envelope > (ENV-Voice selection is done by the breakout Modules) ... LFO..same

Midi-Channel Note NR or Number of Envelope is a real programmer job (C), with usb-upload from computer .... this is a individual device, and once set, it has to play > and it just should do LFOs and Envelopes Fixed routed, no generic, special > in my case for a filterbank.



THE **RIGHT** SIDE of the BRAIN > LFO + ENV Settings (one Voice): ADSR with:
CURVE Paremter which give exponentially to it (no straight lines While Fall and Rise)
Short: just shorten the Maximal lenght of a Envelope, haveing more Feeling on Encoders should change Scope Display also...
LFO: get synced with Midi, and there is a retrigger by Notes...
Phase: offsets the start-Phase
Delay: simple delay (nte-Trig)
Rate: clear from 8 wholes to 128th or so
Wave: access to the Waveforms
Duration: interpret Midisync in trippled, whole notes or whatever...

DEPTH: is the maximal Value of FALL and RISE and SUSTAIN, i know i loose resolution with this...but i have to have a memory filterbank,...doing depth instead with Potentiometers on Filtermodules... would give no memory...

BreakOut

1. Discharged UserInterface for the Brain in “Island mode” (Scopes + Digital-CV-Amount)
2. CV-Breakout EuroModule to be located near the CV-Destination (example: a Filter).
2 Waveforms (ENV+LFO) are mixed together softwareside
that bring 2 advanteges:
1.save one CV-Output
2. the Amplitude of each Waveform is saved in the patch, so the CV-Amount to a Filter is saved in the Patch
That bring 2 disadvanteges:
1.LFO or ENV cant get patched to individual destination
2.the Resulution gets lower 2 very low, and the code has to be adptet much... or have to be made from scratch Because I use the device for a Memory-Filterbox (VCF+VCA), i am ok with the pros and cons, so i call it EASY-CV

Envelope Scope: show the ENV-Waveform
or the Mixed-CV-Output-Waveform (when Switch is in LFO Mode)
and show the Envelope-Amount with a BAR or as numeric Value?
MIXED CV Plug: CV-Output > Mixed Waveform ENV+LFO
Switch @ ENV:

1. Depth-Encoder change ENV Amount of the CV-MIX
2. ENV Scope will show ENV Wave
3. LFO Scope will Show CV-Mix

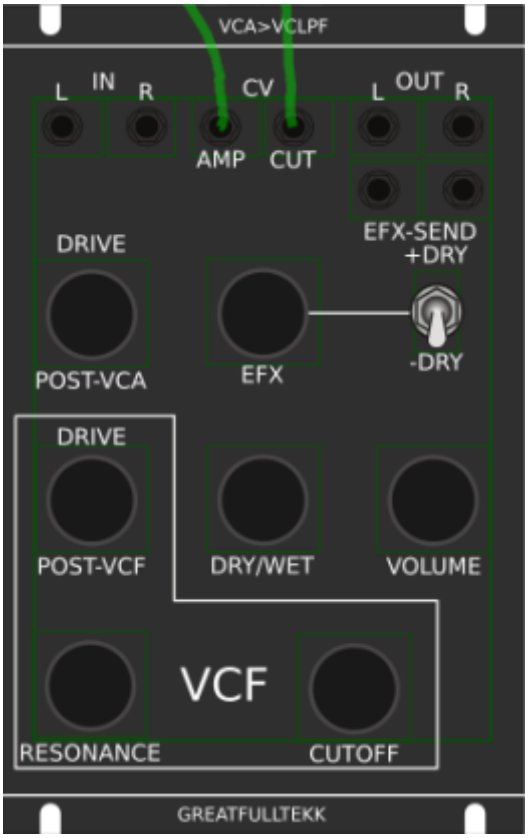
Switch @ LFO: visa versa ENV
Press the Encoders built in **ENCODER-BUTTON**:
will switch the BRAIN-A-D-S-R and L-F-O ENCODER to the Page for THIS Module...
workflow, see what you have with a Scope, over a filter, and edit exact this selected CV on the brain in full detail...

VCA-VCF

CVś(AOUT): 1.VCF-CUT
2.VCF-RES
3.FILTER DRIVE

4.VCA-ENV
5.VCA-DRIVE

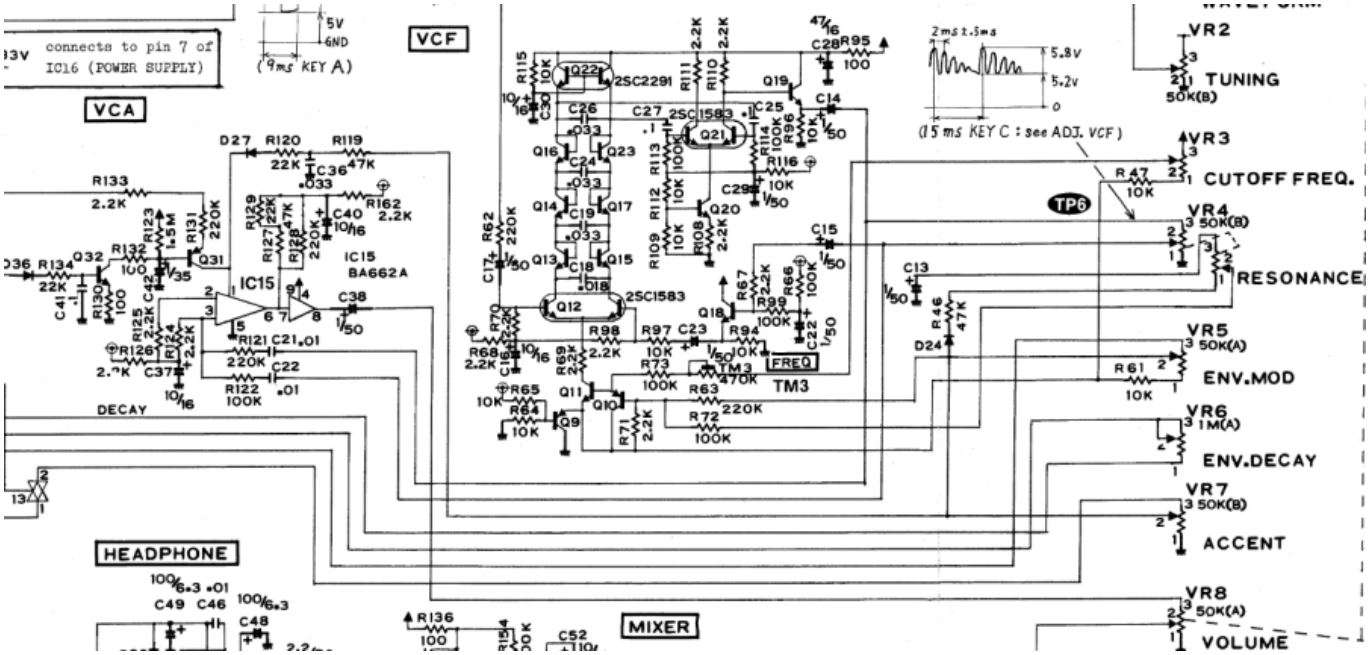
6.DRY-WET (Orginal vs Filtered Mixer) 7.Send 2 EFX1 8.Send 2 EFX2 So 1x 8AOUT-Module for each “Channelstrip”, makes a total of 4x8AOUT-Modules. The Module of Choise is a 16Bit, since i control with the the same AOUT-Channel ENV+CUT-OFF… so there is no analog potentiometer for Cutoff or resonance… it is all saved in the Preset.



the VCA is basicly a simple VCA (MS20Like) or something

Original Schematics 303 - VCA-VCF

here is the 18dB filter… for the 24db Filter



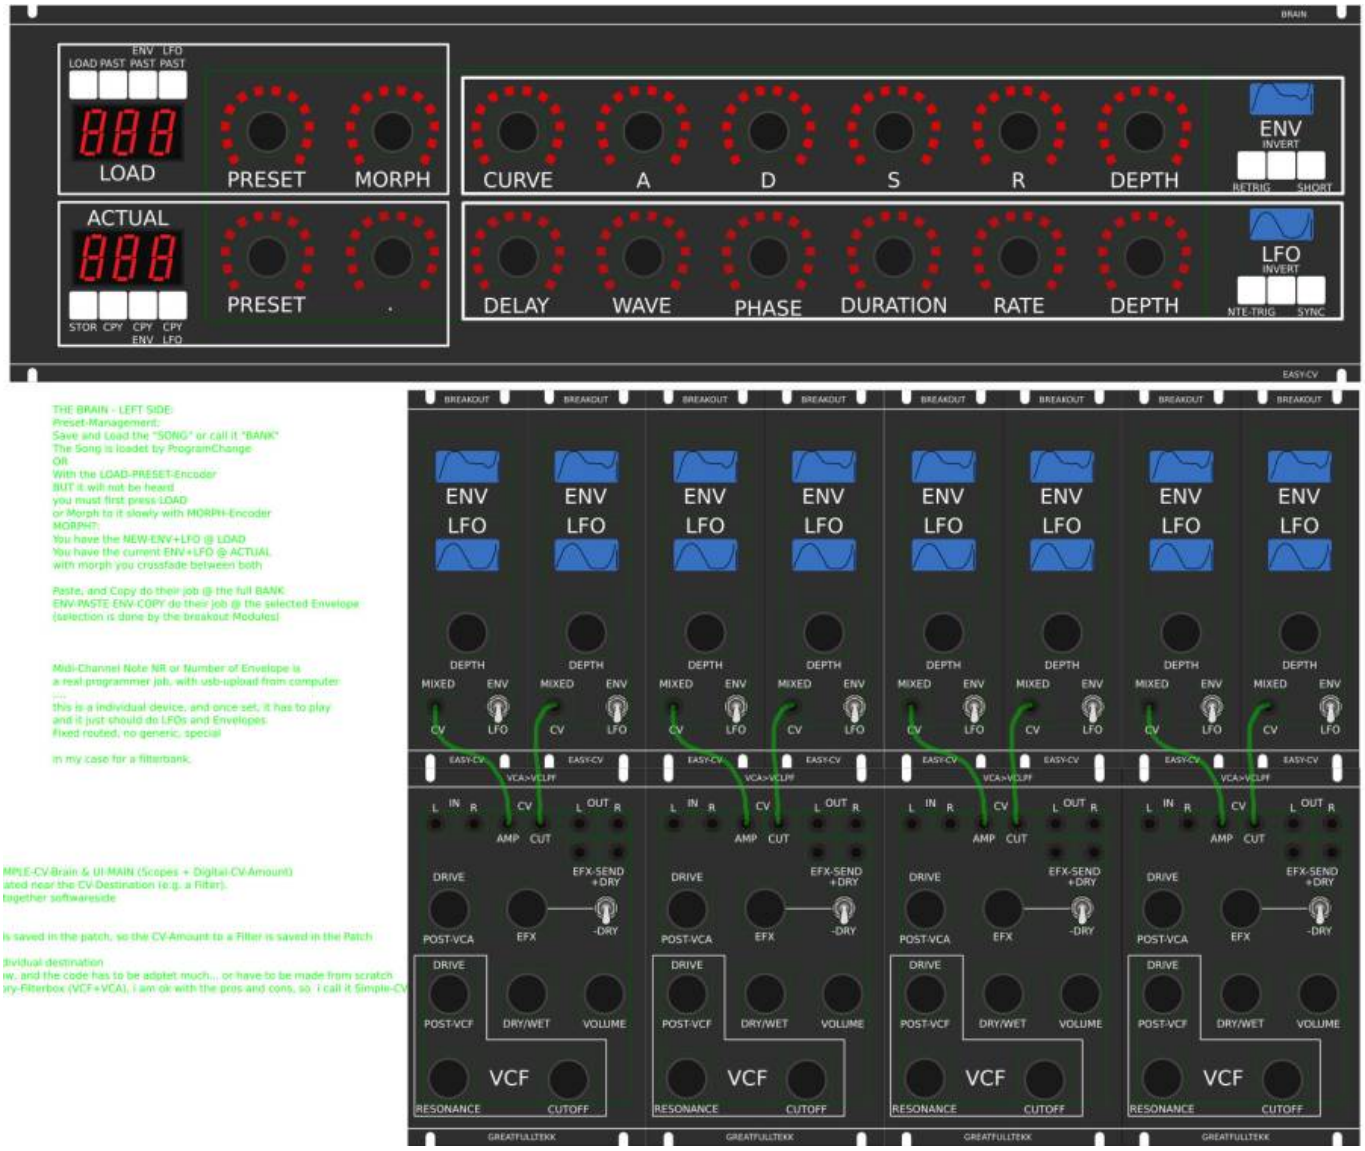
Mod Sources

Fix Me! Fill with 303 mods take orginal VCA (have a bunch of this ICS) or make MB33 Style with standart components...

In order to not use those **overprized MATCHED-PAIR-TRANSISTORS** (over 2€ on the cheapest place) i have to use standart Transistors and make a **VBE-MATCH** on my own, i have already a PCB from here - to measure the transistors with a Multimeter: https://midisizer.com/other/vbe-matching/

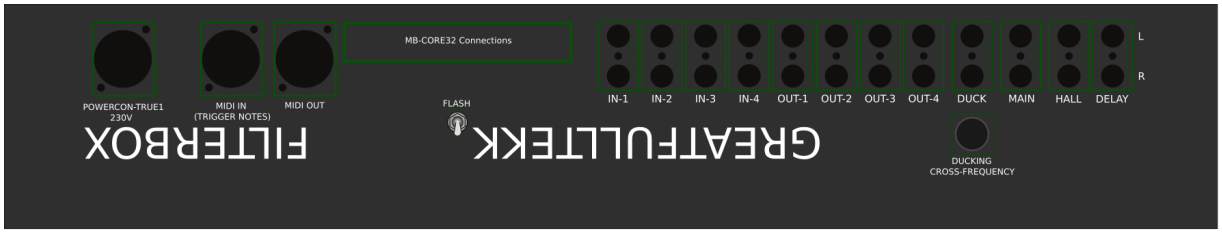
Example for a Filterbank

Here are 8Envelopeś 4xfor VCF 4xfor VCA... in fact there could be used more then this for example 8xVCF and 8xVCA...since the BREAK-OUT-Modules are Modular, and they share the same “Main-UI”...the only limiting factor is the CODE...i am not a C-Guru, and maybe i will still have timing problems with 8x CV-Outs...we will see.

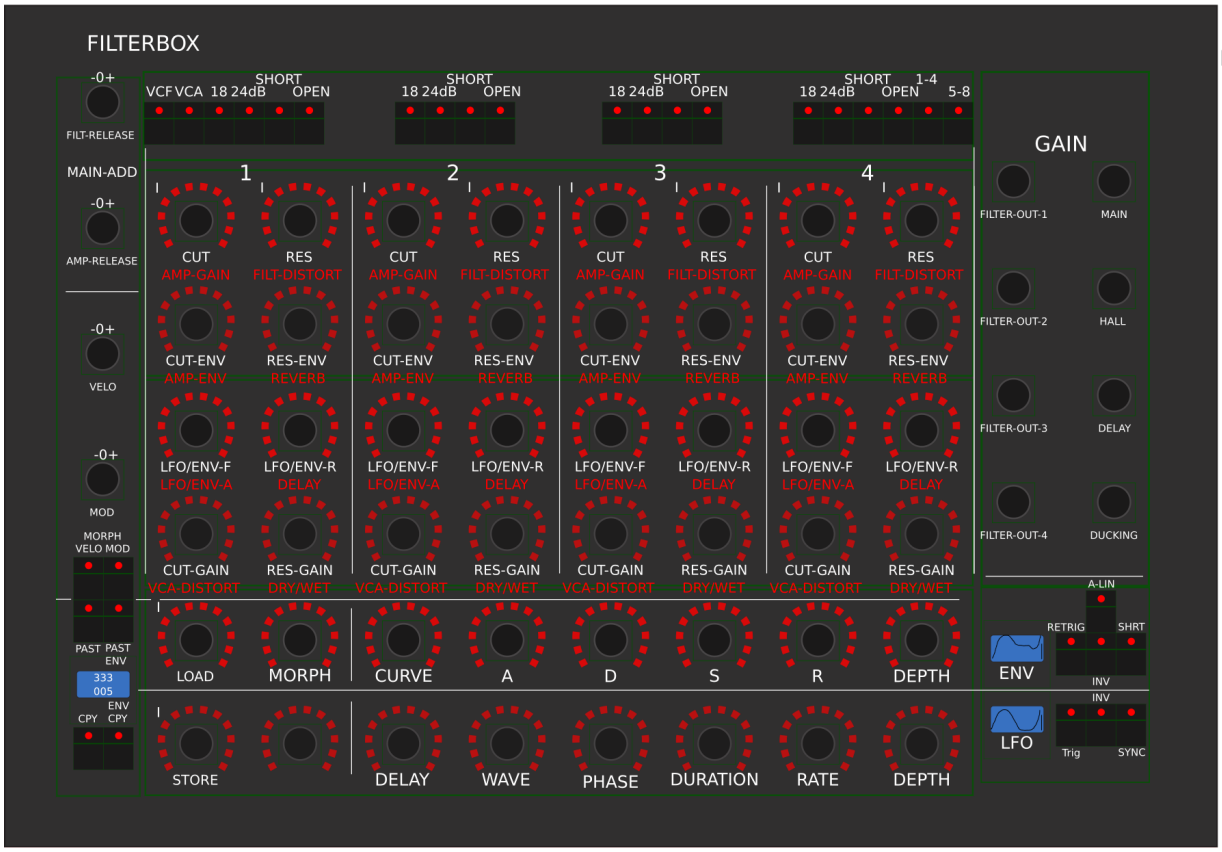


I will use it to filter:
2xGuitar-Loopstations
1xGuitar
1xPercussion-Master

A not EUROMODULE-BASED Version of something like this is the FILTERBOX:



BACK-PANEL



FRONT-PANEL

General Design

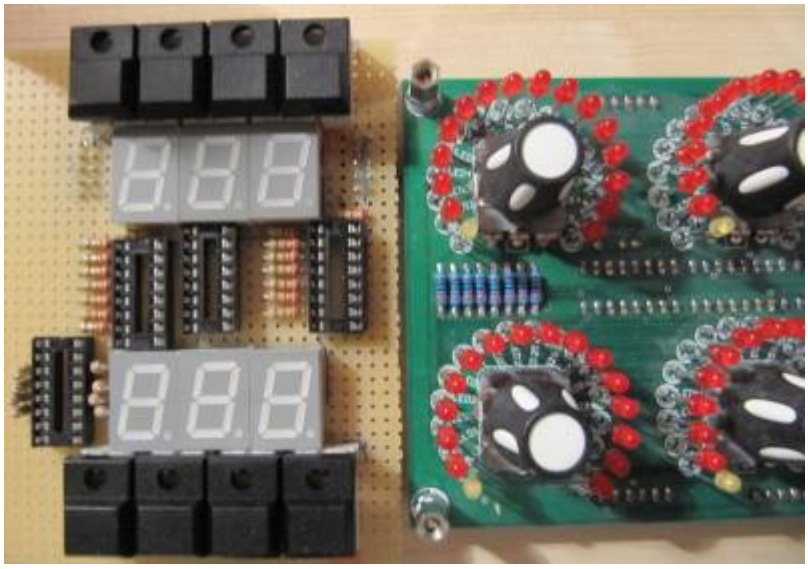
The panel size is 3U, Eurorack compliant

FrontPanel

PCBs

The Analog Circuits (VCF+VCA) get sandwitch as normal (not90° angeled)

Left-Part of the Brain on Breathboard:
7Segment: LTS547AP
Button: ShadowSE/ITT



3D View of Sandwitches

Fix Me! make concept

1. UI Parts Listing

BRAIN + BREAKOUT

- Jacks 3.5mm @ Thonk
- SPDT Switch ON-OFF-ON @ Rs-components

Value	Type	Qty
3.5mm Jack	Vertical PCB-Mount	13
Switch	SPDT Vertical PCB-Mount ON-OFF-ON	1

Fix Me! Fill Table

Pots / Knobs

- Alps RK11K Series
- Alpha Pots @ Thonk
- Knobs Suppliers
- Fix Me! need special 4gang 50KB potentiometers for a STEREO Resonance (stereo filter, one UI)
- Fix Me! need special 4gang xxKB (50?) potis for a Stereo DRY/WET Mix
- Fix Me! need special 2gang xxKB (50?) potis for EFX Send Mix Stereo

- Fix Me! need special 2gang 50KA potis for CUT-OFF Stereo
- Fix Me! need special 2gang Post Transformator Potentiometer (Value have to look in my prototype which is used)

Value	Type	Qty
5K	Linear	x
10K	Linear	x
50K	Linear	x
50K	Logarithmic	x
100K	Linear	x
1M	Linear	x
2M?	Linear	x
Knobs	Soft/Plastic/Alu	x

2. Analog Parts Listing

VCA-VCF-Board

Fix Me! Fill Table

3.Footprint Making in KiCAD

- ALPS Pots
- Alpha Pots
- 3,5mm Jack
- Switch
- Momentary Switch
- 7 Segment LED Display
- OLED DIsplay
- Rotary Encoder

Fix Me! have to be done

4. Schematics in KiCAD

Fix Me! have to be done

5.PCB Making In Kicad

PCB Making Order

- BRAIN PCBs:
a.Left-Brain
b.Right-Brain
- LRE8x2CS - is a generic PCB which i already have (fairlightiiś)
- BREAKOUT PCBs (maybe have to sandwitch because of shiftregisters and less space)
- FILTER PCBs (have to sandwitch)
