

EASY CV

Test Equipment: CV-Destination MB33 MAM:

Introduction

All Parameters are saved as a preset as a song (programchange...)

Digital created LFO+ENV with CV-Output.

No Displays, No Menues, Minimal buttons, much Scopes, much Led-Ring-Rotarys (LRE-8x2CS)
one big UI with complete functions for one LFO+ENV Voice + 4xChannelstrip Controls...

LFO+ENV are mixed together softwareside, to use only one CV-Output

Each Channel = Filter need 8xCV-Outputs

Copy Paste for LFOs and ENvelopes between the Voices

Copy Paste for a Song aka Preset aka Bank aka Program(change)

Jam Style Pattern load (next Preset Display) + Preset Morph between Current-Preset and Next-Preset

The Early Design was a EuroRack-Module: A Breakoutmodule for each CV-Output, with Depth-rotary, Focusswitch (Pushrotary), 2x Scopes (LFO+ENV) and LFO/ENV-Switch to show on one Display the Mixed Waveform & to switch the Rotary to "ENV" or "LFO" Mode (there is only space for one Encoder - maybe just make PAN Style, instead of 2 individual level -maybe more live feel?, how ever when using an 3Stage switch, i could disable MIX-View, or display it on ENV or LFO...maybe a good choise ;)) The Depth-rotary has no Ledring, want to display it as a bar or as Value in the scope...

FrontPanel

Brain

THE **LEFT SIDE** of the BRAIN > Preset-Management: **Save & Load** the PROGRAM, can be done by Midi-ProgramChange -or With the **LOAD-PRESET**-Encoder then press **LOAD** -or **Morph** to the next Program slowly with the MORPH-Encoder -Another option is to take a **PUSH-ENCODER** for **LOAD & STORE** > and load and store it by pushing it... would free 2 buttons for other functions.

MORPH?:

-The Upper 7 Segment LED- Display: is the **LOAD Display** indicate the new Program with ENV+LFO - The downer 7 Segment LED- Display: is the **STORE Display** it indicates also the current Program with ENV+LFO

-with morph you crossfade between both Presets (be carefull, first Store the current Preset

Paste & Copy do their job @ the whole PROGRAM Memory

ENV-PASTE & ENV-COPY do their job @ the selected Envelope > (ENV-Voice selection is done by the breakout Modules) ... LFO..same

Midi-Channel Note NR or Number of Envelope is a real programmer job (C), with usb-upload from computer this is a individual device, and once set, it has to play > and it just should do LFOs and Envelopes Fixed routed, no generic, special > in my case for a filterbank.

THE **RIGHT SIDE** of the BRAIN > LFO + ENV Settings (one Voice): ADSR with:

CURVE Parameter which give exponentially to it (no straight lines While Fall and Rise)

Short: just shorten the Maximal length of a Envelope, having more Feeling on Encoders should change Scope Display also...

LFO: get synced with Midi, and there is a retrigger by Notes...

Phase: offsets the start-Phase

Delay: simple delay (nte-Trig)

Rate: clear from 8 wholes to 128th or so

Wave: access to the Waveforms

Duration: interpret Midisync in trippled, whole notes or whatever...

DEPTH: is the maximal Value of FALL and RISE and SUSTAIN, i know i loose resolution with this...but i have to have a memory filterbank,...doing depth instead with Potentiometers on Filtermodules... would give no memory...

BreakOut

this will not be supportet > since i dont want a Euro-Module Setup > i want one big filterbox.

1. Discharged UserInterface for the Brain in "Island mode" (Scopes + Digital-CV-Amount)

2. CV-Breakout EuroModule to be located near the CV-Destination (example: a Filter).

2 Waveforms (ENV+LFO) are mixed together softwareside

that bring 2 advanteges:

1. save one CV-Output

2. the Amplitude of each Waveform is saved in the patch, so the CV-Amount to a Filter is saved in the Patch

That bring 2 disadvantages:

1. LFO or ENV cant get patched to individual destination

2. the Resolution gets lower 2 very low, and the code has to be adptet much... or have to be made from scratch Because I use the device for a Memory-Filterbox (VCF+VCA), i am ok with the pros and cons, so i call it EASY-CV

Envelope Scope: show the ENV-Waveform
or the Mixed-CV-Output-Waveform (when Switch is in LFO Mode)
and show the Envelope-Amount with a BAR or as numeric Value?

MIXED CV Plug: CV-Output > Mixed Waveform ENV+LFO

Switch @ ENV:

1. Depth-Encoder change ENV Amount of the CV-MIX
2. ENV Scope will show ENV Wave
3. LFO Scope will Show CV-Mix

Switch @ LFO: visa versa ENV

Press the Encoders built in **ENCODER-BUTTON:**

will switch the BRAIN-A-D-S-R and L-F-O ENCODER to the Page for THIS Module...

workflow, see what you have with a Scope, over a filter, and edit exact this selected CV on the brain in full detail...

VCA-VCF

CVs(AOUT):

- 1.VCF-CUT
- 2.VCF-RES
- 3.FILTER DRIVE
- 4.VCA-ENV
- 5.VCA-DRIVE

6.DRY-WET (Original vs Filtered Mixer)

7.Send 2 EFX1

8.Send 2 EFX2

So 1x 8AOUT-Module for each "Channelstrip", makes a total of 4x8AOUT-Modules.

The Module of Choise is a 16Bit, since i control with the the same AOUT-Channel ENV+CUT-OFF... so there is no analog potentiometer for Cutoff or resonance... it is all saved in the Preset.

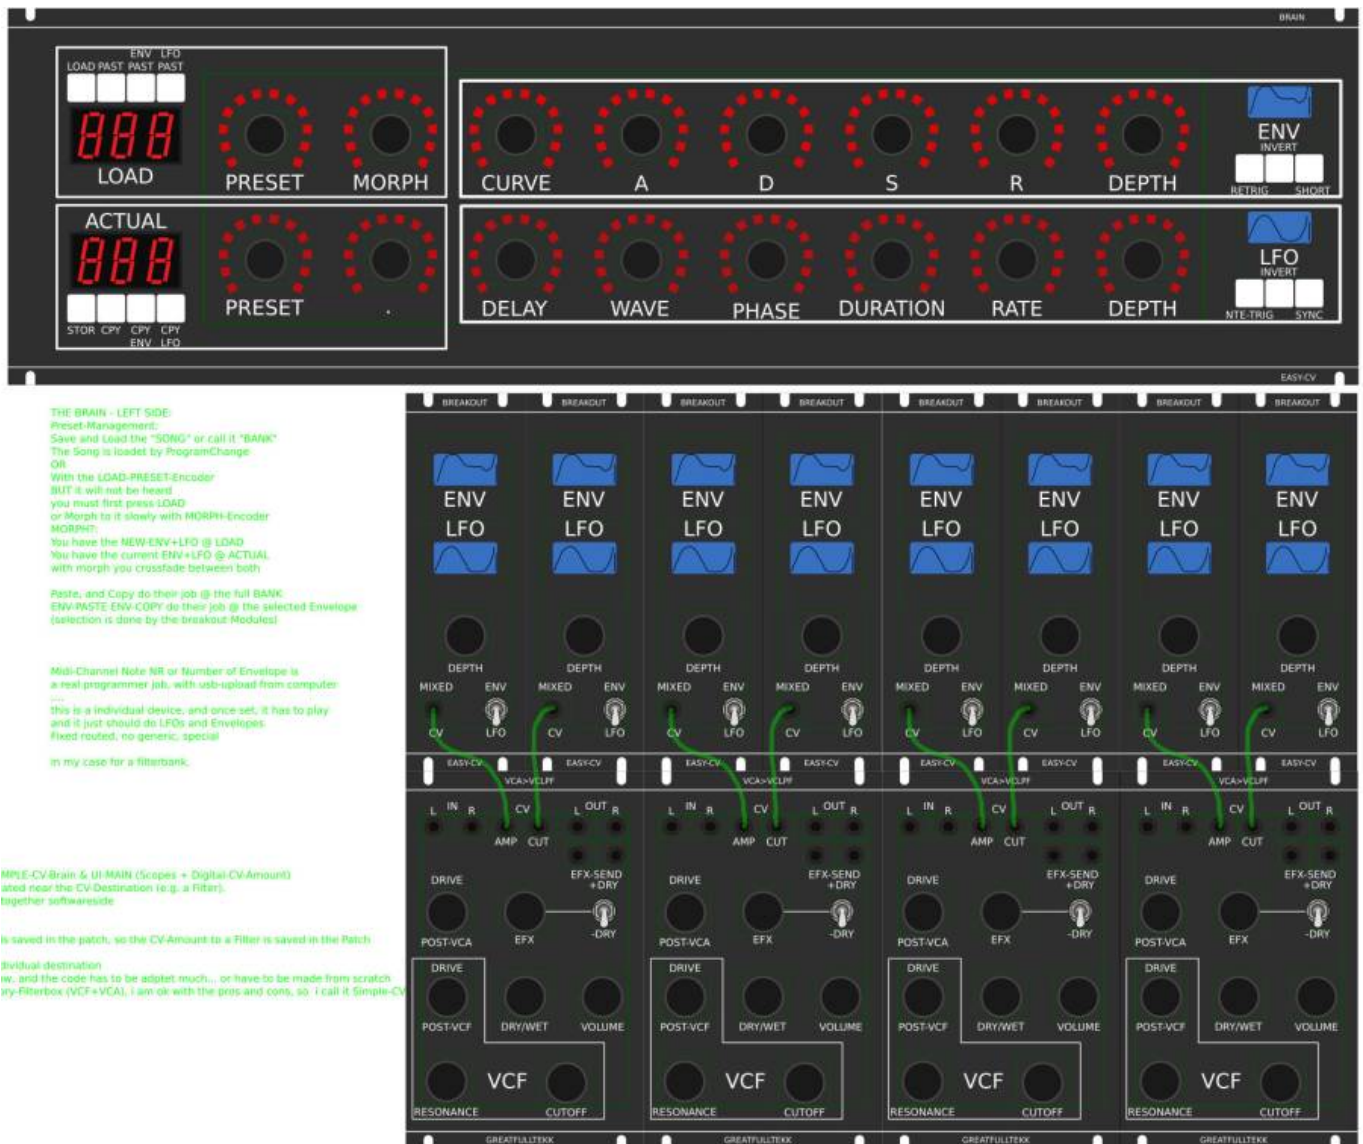

the VCA is basicly a simple VCA (MS20Like) or something

the VCF are a 303 18dB for the 24db Filter it will be a SSM2044, where boards are available.

Original Schematics 303 - VCA-VCF

Here are 8 Envelopes 4x for VCF 4x for VCA... in fact there could be used more than this for example 8x VCF and 8x VCA... since the BREAK-OUT-Modules are Modular, and they share the same "Main-UI"... the only limiting factor is the CODE... i am not a C-Guru, and maybe i will still have timing problems with 8x CV-Outs... we will see.

I will use it to filter:

2xGuitar-Loopstations

1xGuitar

1xPercussion-Master

A not EUROMODULE-BASED Version of something like this is the FILTERBOX: (this is the Design i prefer @ the moment)

General Design

The Panel is made of transparent but shaded (black transparent) Plexiglass.

The Panel is directly mounted into a Flightcase.

The 3x LRE8x2 (LED RING) are mounted with the Encoder Nuts, the rest of the PCBs are mounted with normal thru-hole screws.

FrontPanel

PCBs

The Analog-IO Board on the Backpanel, holds:

- the ENV-VCA's
- the DryWet-VCA's, Filter-Release-Switch
- SEND-EFX-VCA's
- the Summing Mixer
- the Ducking-Cross-AMP-Follower+Ducking-VCA's
- VCF+ENV-VCA-Distortion-Driver-VCA's

-the Connectors to connect the Filter, AOOUT, Poti-Boards

Left-Part of the Brain on Breathboard:

OLED-Display

Button: ShadowSE/ITT

ENCODER: with built in Pushswitch

a early state with 7Segment Displays to indicate the Patches

1. UI Parts Listing

BRAIN + BREAKOUT

- 6,3 Neutrik Connector
- [FLASH-Switch @ Rs-components](#)

Value	Type	Qty
Switch	SPDT Vertical PCB-Mount ON-OFF-ON	1

Fill Table

Pots / Knobs

- [Alps RK11K Series](#)
- [Alpha Pots @ Thonk](#)
- [Knobs Suppliers](#)

which Values for the Audio-Mixer?

3. Footprint Making in KiCAD

- ALPS Pots
- Alpha Pots

- 6,3mm Jack
- Switch
- Momentary Switch
- SSD-Displays
- OLED Display
- Rotary Encoder

have to be done

4. Schematics in KiCAD

have to be done

5.PCB Making In Kicad

PCB Making Order

- BRAIN PCBs:
 - a.Left-Brain
 - b.Right-Brain
- 3x LRE8x2CS - is a generic PCB which i already have (fairlightiiś)
- Backpanel PCB
- FILTER PCBs
