

SEQ V4+

Image credit: TK. Prototype version.

Around November 2016 I embarked upon a new version of the SEQ v4. Some initial concepts had an integrated 16*4 BLM included, but the idea was refined to something simpler.

The goals of the project are to provide an upgraded control surface with high-quality hardware. This includes Matias keyswitches rated at 50M cycles and a streamlined workflow with a dedicated button row.

Although I (latigid on) have done most of the design and prototyping, I am in communication with TK, who will cover the software changes to get the new control surface up and running. I've also had a lot of collaboration with Adrian Hallik who is looking at a case design.

Required modules

The following components are intended to comprise a full SEQ V4+:

- [le MEC](#) (*2 required)
 - [Beat LED](#) (optional but recommended)
- [ENC-PLATE](#) (*2 required)
- [JOG](#)
- Two 40*2 OLED displays (details later)
- A [wCoreF4](#) including:
 - [wCoreF4 PCB](#)
 - [USB-power module](#)
 - [RES-SD module](#)
- [MIDI8](#)

- [I2C](#)
- [line-transmit](#)
 - in effect there is space for a DB-25 expansion port, so alternative options are possible.

Matching case

TBC

Module interconnection and assembly

TBC
