

This page will contain the information about the combined lcd/button matrix [forum topic](#)^{uCApPs}

right now I'm using a modified version of the sm_simple C example
this code will be rewritten to make it more coherent

modifications to [scan matrix example](#)^{uCApPs}

Hardware

[DOUT wiring](#)

[DIN wiring](#)

**note: schematics not finished!*

Software

in main.c:

```
...
//second shiftregister drives the leds
#define LEDOUT 1
...
void LM_SetRow(){
    MIOS_DOUT_SRSet(LEDOUT,ledtest[sm_col]);
}

/////////////////////////////////////////////////////////////////////////////////////////////////////////////////////////////////
/
// This function is called by MIOS before the shift register are loaded
/////////////////////////////////////////////////////////////////////////////////////////////////////////////////////////////////
/
void SR_Service_Prepare(void) __wparam
{
    // call the Scan Matrix Driver
    SM_PrepareCol();
    // call the Led Matrix Driver
    LM_SetRow();
}
...

```

in sm_simple.asm:

```
...
global    _sm_button_column
global    _sm_button_row
global    _sm_button_value

```

```

global  _sm_col

;; import lables
extern  _SM_NotifyToggle

; =====

accessram    udata        ; (no access ram required, these variables can
be located anywhere)

_sm_button_column  res    1    ; exported to C, therefore an "_" has been
added
_sm_button_row     res    1
_sm_button_value   res    1
_sm_col            res    1

...

SM_PrepareCol
    ;; select next DOUT register

    ;; (current column + 1) & 0x07
    SET_BSR    sm_selected_column
    incf      sm_selected_column, W, BANKED    ; (* see note below)
    andlw    0x07
    ;_sm_col is used by LM_SetRow()
    movwf    _sm_col
    call     MIOS_HLP_GetBitANDMask    ; (inverted 1 of 8 code)

    ...

```

and finally in sm_simple.h:

```

...
extern unsigned char sm_button_value;
extern unsigned char sm_col;
...

```
