

# Envelope Follower

based on Harry Bissel  
a SMD Variant, ready for Pick and Place

-shown 2 identical boards on one pcb - to save money..

## Features

- \* audio in \* Envelope out \* Gate out + Gate Threshold-Poti
- \* Full-wave rectifier
- \* 3 identical Peakdetectors which are Reseted from a "stepper"
- \* a Oscillator with tunable Frequency to drive the stepper
- \* Smoothingcap set via Jumper
- \* Debugging Jumpers
- \* PTC and Diode Polarity Protection on the Supply-side

## Hardware Requirements

- This Device i build as input module for my [CV1](#) Project, but can be used for other things too
- Soldering Iron - with a Dip that can Handle SMD-Parts, Wires, solder Paste...
- Eurorack Power Source +-12V!

## Building

The Design is optimized for Pick and Place most SMD Parts are on the Top-PCB

i ordered 5 PCBs from JLCPCB with almost all SMD Parts presoldered(except 2 SOIC chips PTC and Protection Diode)

now waiting for Presoldered PCBs

## Frontpanel

## BOM LCSC

these are the parts which are presoldered by the Pick and Place Machine, these are “Basic” Parts the values with a “x” in it, like Dx1 — are because there are 2 Identical Parts on 1 PCB, because there 2PCBs on 1PCB.... so Dx1 is the same like D1, but its position is on the second board.

when making 10Boards...a total of **42,44€** presoldered on the PCBsincl Shipping and Import-Taxes

## BOM Mouser

These are the parts which has to be handsoldered

[copy list below](#), and paste in this link, you will need to order the project 2 times since 2PCBs are on 1PCB

583-FM4002|2

490-SJ1-3535NG-GR|3

595-CD4017BM|1

652-PTV09A-3015FB103|1

652-PTV09A3020FB104|1

for prototyping i ordered:

**490-SJ1-3535NG-GR** instead of **490-SJ1-3535NG** because it is out of stock - so **GREEN sockets** for now!

when making 10PCBs this make a total of **69,83€** incl Shipping/VAT which is free above 50€!

There are 2 SOICs that have to get Handsoldered, i have done this before and its easy!

# Schematic

## To Do

frontplate  
Debugging First Version

**experiment with the Smooting CAP:** a Header is connected paralell to a integrated 100nF Cap, connect there a CAP to encrease the smoothing

**experiment with the Frequency Pot:** a lin10K + 1K internal Serial Resistor which gives a range of 1K-12K - i also made a Header here, which you can bridge then you have 1-12K, or you put a resistor there for example a 5K, then you will get a range from 6-16K...

I addet some Jumpers to break the circuit for debugging or measurement
