

TriggerMatrix V5

first renders off Triggermatrix V5

TM-V5 uses custom PCBs

17 Screens now driven by the Display driver PCB

So the Matrix-Cells get names now in X and Y view

Trigger-Output on 5V Level (before it was all midi only)

Trigger-Input on 3V, 5V or Mic-Preamplifier-Level

The whole Device will be a bigger because of Extra Screens and because of 2x16 3.5 Trigger JAKcs...

Housing and Panels

For Files and Pictures, please go to [TM5-Housing](#)

Software

You can Triggermatrix as Remote Device to controll ableton live (Launch RedBox + MidiClip Editor)

[blm_sysex_protocoll.zip](#)

[tm5-blm.zip](#)

[blm_source.zip](#)

[blm_sysex_protocoll.zip](#)

u can use the BLM_Sourcecode, to make a simular Controller (without all that Triggermatrix Code), so if you want to upgrade an original Midibox BLM16x16+X with a stm32 then this will help
